

Tradelog SAU and the companies of the group consider the environment as a strategic element of management and has to reduce the impacts of logistics and transport solutions through a series of commitments ensure the implementation and maintenance of appropriate and effective environmental management systems, seeking continuous improvement.

Our main environmental aspects are: energy consumption, liquid fuel consumption, emission of gases and particulate matter, waste generation and those associated with emergency situations. These are the basis to develop our objectives in a sustainable way, namely:

- Adequately manage environmental risk, including pollution prevention and response emergency in case of accidents, following established and previously communicated procedures.
- To comply with and respect the applicable environmental legislation, as well as others voluntarily adopted.
- To take care of the environment, by minimizing and/or controlling the significant environmental aspects originated for the management of our activities.
- To train and raise awareness about environmental issues to collaborators following the training schedule previously defined and on demand according to need. Also, consider customers, suppliers and parties involved in the value chain in the communication processes on the improvement of behavior environmental of the company.
- Making improvement, proactivity, efficiency and pollution prevention a company philosophy that provides a reduction in cost consistent with the commitment to environmental protection.
- Establish environmental matrices in all branches, to identify, analyze and minimize impacts environmental operation.
- Implement circular economy actions with a disruptive and collaborative approach, to contribute as customized global problems such as scarcity of resources, environmental pollution and acceleration of global warming.
